"French Campus"
Subjects and Predicates

Gifford

Just a century and a quarter ago Middlebury farmers were prying off rocks from a limestone ledge near Weybridge Hill for a new dormitory to be known as Painter Hall. The stone proved pretty serviceable. Once again they're back at the same outcrop drilling for Gifford Memorial Hall. (Incidentally the College now has a permanent lien on that ledge; to the long odd list of college possessions such as a summer hotel, land in Oklahoma, a sugar bush, dairy farm, we can add a quarry).

A comparison between the two dormitories, Painter and Gifford, offers a nice commentary on how "education" has changed in a hundred and twenty-five years. About the only comforts Painter offered back in the early 1800's were fireplaces. Students brought from home their own beds, bedsteads, and bathtubs. They furnished their own candles, chopped and lugged their own fireplace wood and either cooked their own meals or tramped across town to private homes to get them.

Then look at plans for Gifford, for which stern simplicity is specified: hardwood furniture in every room, bath and shower rooms on every floor; a huge library-lounge and commons, indirect lighting, a laundry, reception foyer, suites for kitchen help, etc. etc. And of all these educational "improvements" the one that our great grandfathers would probably cherish most and the one we wouldn't even bother to mention is the common steam radiator.

Boom

Maybe war doesn't have anything to do with it, maybe it's only a coincidence, but Middlebury seems to have established an uncanny tradition of putting up new buildings every time battle is in the air. It all started with Painter Hall, as soon as the War of 1812 was comfortably under way Middlebury citizens inaugurated a campaign for a new "West College."

The Civil War netted Starr Hall, built, burned, and rebuilt. Warner Science Hall and Starr Library went up on the wave of Spanish War hysteria. A really big struggle like the World War brought a string of new buildings ranging from a grandstand to Mead Chapel and Hepburn Hall. And now with another one looming up, plans are spread for completing the men's quadrangle with a dormitory, Gifford Memorial Hall, and a class Building, Monroe Hall. If someone came along with financial backing for the Indoor Field or Gymnasium we'd stake everything on a prediction that the war would last at least seven years.

799

Sentimentality is rarely admitted to preparation of statistics in the Registrar's office. But on her twenty-sixth year as College Registrar, Miss Bristol wanted very badly to see the enrollment reach the eight hundred's. She was doomed to disappointment; the figures stuck at 799. Her high hope before retirement is to work with double the number of students she counted in 1913, 441.

However, Miss Bristol has become accustomed during the past few years to dealing with record-making figures, and 1939 is no exception. 799 is the largest enrollment in Middlebury history.

Ex-gubernatorial Greetings

A decade ago when Franklin D. Roosevelt was governor of New York, he had as neighbor governor across Lake Champlain John E. Weeks. The ten years have in no way dulled the friendship between the two.

"Memories of delightful personal and official relations prompt me with heart and soul to send this message of affection on the happy occasion of the sixtieth anniversary of your marriage," wired President Roosevelt last October. "What a blessing that you have been granted the boon of length of days and the rare privilege of celebrating three score years of married happiness. By every law of compensation the pleasure which will be yours will be enhanced by the consciousness that you have always been active in bringing sunshine and gladness into the lives of others. And so Mrs. Roosevelt and I join in wishing you happiness on your wedding anniversary with all of the accomplishments of 'honor, love, obedience, troops of friends.'"

The President of the United States was expressing the sentiment that every other Vermonter felt toward their ex-governor and that every Middleberian felt toward his senior trustee.

Middlebury Bookshelf

Across the country from the Imperial Valley to Aroostook County, book reviewers have been counseling their bookworms not to miss Bread Loaf Anthology published by the Middlebury College Press. "The verse is of far more than regional significance," claimed the little Pacific coast poetry magazine Westward. Back east under the eaves of Yale University, the New Haven Courier advised at length: "First of all read the Introduction by W. Storrs Lee... In conception and execution this Introduction is an eloquent and fitting tribute to Bread..."
Loaf Mountain, to Bread Loaf farmhouse and Inn and to Joseph Battell.

... Next you must not miss reading Robert Frost's two-page confession of faith. These two marvellous forewords inevitably induce a kindly reception for that which is to follow.

... This is indubitably a book of poetry by any man's definition.' Down south the North Carolina Winston-Salem Journal and Sentinel heaped praise on the excellent quality of the poetry, the six delightful illustrations, and in general on the new accomplishment of Middlebury and Bread Loaf. The Boston Transcript considered the book a genuine 'collectors item'; the Publishers Weekly 'an example of sound work being attempted by small college presses'; the Hartford Times, 'a book for your reading table, something to share of information, good poetry and an ideal.' The Saturday Review of Literature conceded that the Anthology is a 'laudable collection', the New York Times that it is 'exceedingly interesting' and 'delightfully designed,' and the Springfield Union that the poems 'represent the best in American poetry today.' But the best advice comes from the World Herald of Omaha, Nebraska: 'The Bread Loaf Anthology ought to be held in mind as a gift book or purchased as a permanent possession... a handsome volume... not only is this a notable book because of the extraordinary quality of its poetry, but because it is creative work of not less than national dimensions... A top-flight anthology.'

If you haven't yet started a Middlebury shelf, we suggest—for old time's sake—that you line up all the old texts left over from college days, then add the Bread Loaf Anthology AND the latest College Press volume released December 1st, Not Faster Than A Walk, by Dr. Viola C. White.

Not Faster Than A Walk is a notebook on Middlebury and Vermont, and its appeal to alumni should be even broader than the Anthology. Dr. White has covered every inch of highway, byroad and path ever tramped by a Middlebury student from Chipman

Hill reservoir to the Cider Mill, from Passion Puddle to Beldon's, and added up her experiences in a delightful book. Her observations on nature and the small town are in turn nearly satirical, humourous, poetic, philosophical, witty—and certainly more sensitive than those of other Vermont chroniclers of recent years. What Thoreau did with Concord and Walden Pond, Miss White has done with Middlebury. Out of trivial and inconsequential things, the weather, wild flowers, rural gossip, faculty anecdotes, campus traditions, she has caught the real essence of Middlebury. Anyone who ever became addicted to Middlebury will pick this book as an essential addition to a Middlebury shelf.

War and Peace

The yen for belligerency—inter-collegiate, interfraternity, interclass—would certainly lead visiting gentry from Mars to conclude hastily that U.S. campuses are the most martial little islands northwest of their rosy planet. But the flutter of documentary peace polls would be most disappointing. The stoutest strongholds for peace in the whole country are its colleges—if the compilations from innumerable ballot-takings may be accepted as fact.

Back in 1933 nearly half of the Middlebury students virtually pledged themselves that they would participate in no war except in resistance of actual invasion. In 1934 a vast majority wanted the President to make a proclamation that in the future the United States would sever all commercial relations with belligerent nations. In 1935 only about three out of four would agree to fight even if the United States were invaded. (Cored votes rather stacked this vote, though.) In 1936 the voting was limited to whether or not students should continue to participate in the annual peace demonstration. 389 said no, 127 no. 1937 was a peaceful year as far as polls went; no questionnaire. With a one-sided battle on in Spain, in 1938 only one in ten students, strangely enough, were isolationists, while most everybody wanted the League of Nations "revised," a popular referendum before the United States declared war, and an application of voluntary boycotts to goods coming from nations engaged in aggressive warfare. Come 1939—as of October first—the vote against going to war with Germany stood at 365 to 17. Even if the Allies began to

*Bread Loaf Anthology was awarded honorable mention by Bookbinding and Book Production in the August Book Clinic. Honors for which four books are chosen each month.

Architect's plan for Gifford Memorial Hall
lose, the ballots tally more than two to one against getting into the fray.

Back to the Air

Three years ago academic eyebrows were lifted when a single-course department of Aeronautics was introduced to the Middlebury curriculum. Questions were raised as to how it fitted into a liberal arts college, how it related to the humanities. The department lasted but one year. September 1939 brought aviation back to the campus; no eyebrows were lifted; no one questioned its place, for it was on a strictly extracurricular basis, backed by the U.S. government. The Civil Aeronautics Authority had weighed the merits of hundreds of educational institutions as training grounds for pilots, and placed Middlebury on the accredited list. Here a quota of twenty pilots out of a total of ten thousand will receive expert training under government supervision. During the first semester designated instruction is being offered in History of Aviation, civil aeronautics regulations, navigation, meteorology, parachutes, aircraft and theory of flight, engines, instruments and radio. Ground training is brief and superficial according to San Antonio, Pensacola, or M.I.T. standards, but quite superior to average civil instruction. Not until some rudimentary class work had been completed were any undergraduates permitted to do any actual flying. Since the Middlebury airport is now abandoned, Bristol is the “campus” air base. Between November and next June every student taking the course will have to make a full seventy trips to Bristol, to get in a minimum of seventy half-hour lessons in the air. Except for actual flying instruction, all class work is conducted by faculty members Wissler, Swett and Heinrichs. Professor Bowker heads up the work; Joseph Rock, experienced flyer, carries on in Bristol.

Remembering an Urbane Greek

(For Dr. William Burrage)

When the letters came saying that he had died and I knew that he would no longer walk down the village street late in the winter nights, wrapped in his fur-lined greatcoat like a character in a Russian novel, on his way to the Inn or the sidewalk Diner for his nightly cup of coffee, I began to remember that raw day in March when he had climbed the stairs to my room, to have coffee in front of my fire, and how he had said—a witty sparkle in his eyes while he stirred the spoon through his coffee with a slow, contemplative rhythm, “Ah, I wish eternity were like a clammy old hotel that I once knew on the Left Bank in Paris, with high ceilings and long shabby red hangings and the damp Paris sunlight coming through the French windows and I sitting there smoking a very fine cigar.”

Wherever he went, whether walking across the college campus in the rain under an expansively black umbrella that spread over his head and shoulders like a melancholy mushroom, or arriving at his Horace class in Old Chapel wearing a pair of dapper golf shoes, he moved with the meditative aloofness of a man completely redeemed from the vulgar exactions of time. He belonged to a tradition that was adamant in its allegiance to distinction, a tradition of philosophic calm unimpressed by the tempo of a syncopated century, and in the ripeness of his serenity there was the spiritual poise of a man who had penetrated the timeless quality of all experience and who refused in his heart of hearts to let any contingency of fate be superior to the resources of his wit.

He was the foe of dullness and mediocrity, and the legend of his epigrams became a part of town and campus history. In the distillation of a trenchant phrase he could summarize an incongruous situation perfectly or create a caricature that was unforgettable. Nothing of the comic irony in the patterns of living ever escaped him, and the laconic brilliancy of his commentaries became the quotable legacy of every undergraduate wise enough to have chosen one of his courses. For the theater and all its properties he had a permanent love, and he found an almost creative enjoyment from appraising life in terms of the dramatist’s values. Generations of students who may have long forgotten the Greek tenses or the Latin syntax that he taught them will never quite forget the mellow accentuations of his voice and the inimitable gestures of his fingers as he read lines from Horace as though Horace were a man with whom he had dined the night before, or the suave drollery that he brought to an interpretation of his favorite Andromel and the Lian, or the grave absorption of his tones as he read aloud some somber passage from Aeschylus or Euripides.

“I believe,” he once said, holding a flickering match to the grim stub of his perpetually extinguished cigar, “I believe in high thinking—and in equally high living!” That was the heritage from the ancient Greek in him. Just as he never allowed the fine authenticity of his scholarship to deteriorate into academic pedantry, so he never let age or professional routine diminish his capacities for enjoyment, or dull his active genius for savoring whatever was excellent and alive.

—Israel Smith, ’35.
C'est la Guerre

Edited from Cables by Paul Ward, '25, Foreign Correspondent of the Baltimore Sun

ALREADY there is variety, excitement and good suspense in the assortment of Middlebury war stories accumulated since last August: Bouryschkeine, '33, grinding a camera somewhere in Europe for Fox Movietone News; Ski Coach Schlatter reportedly in the Swiss army; Chalmers, '38, evacuated from Oxford with other Rhodes scholars, returning on the Statendam and rescuing en route the crew of the Winkleigh; Morize, assisting Giraudoux in the French Ministry of Propaganda, Bureau of Information; and a long list of alumni and faculty members clearing foreign ports "just in time."

But the Middleburian with the best ringside seat is Paul Ward, '25, staff correspondent of the Baltimore Sun. He has the distinction of being one of the first quartet of journalists literally to crash the Maginot Line. Tired of waiting around for news to filter through the usual channels, he and three other reporters one morning late in September piled into a private car and headed east toward the front. Past sentries with fixed bayonets, anti-aircraft batteries, military airports, machine gun nests they rode, never once challenged until they had crossed the Maginot Line and stood on German soil behind the French advance lines. But the Sun has given us permission to reprint the story in Ward's own words, as it came by cable.

"Somewhere Beyond the Maginot Line on the Saar Front, Just Beyond Range, Sept. 21. (By Wireless). From hills that in daylight would be easily visible from the hilltop where this dispatch is being written German artillery tonight has been barking out an accompaniment to what an official French communiqué says was a local and unsuccessful attack on the French army's advanced positions. We can hear the gunfire plainly, and although we are only a little way behind the front lines it sounds no more menacing than distant thunder-claps.

"Earlier today—after a long swing behind the French front—we had crossed the Maginot Line, arrived at the front itself and looked down from a hilltop on German as well as French front lines. We also had seen a German officer taken prisoner and had watched French anti-aircraft guns drive back to their bases three German reconnaissances planes that came zooming high above their heads. In addition we had lunched with French intelligence officers in a room whose windows commanded an excellent view of the front and had had the terrain of this sector and both the German and French positions sketched out for us in pencil on a marble-topped table before one of those windows. Had we arrived a few minutes earlier, according to the intelligence officers, we might have seen a French captain parachute safely to earth and the Germans shoot down a French observation balloon. They were apologetic about our having missed that sight, but their apologies were wasted on us. We were feeling something like Columbus must have felt on discovering America. For we had achieved our ambition to be among the first American journalists to reach the Western front. With three other Americans we had attained the privilege of being not only the first journalists of any nationality to visit the French front, but also the first to get beyond the Maginot Line since the war began.

"We were, by the same token, the first reporters to reach the German soil behind France's advancing armies, or rather what had been German soil until the French pierced the Reich frontier after the declaration of war eighteen days ago and began their steady conquest of German positions in front of the Siegfried Line in preparation for a major offensive against the line itself. We were, of course, the first reporters to get a glimpse of both the German and French front lines and see the actual combat from the French side in this war.

"In the course of our visit to the front we were struck chiefly by three things: first, the placidity of the front. Except for brief bursts of artillery fire it was as quiet as Vermont and as peaceful in appearance as the Green Spring Valley. No Man's Land isn't yet a gash of muddy holes and shell-torn trees, and no unbroken lines of trenches mark the opposing front lines. Instead, the opposing positions are strategically
scattered and so hidden that they can’t be detected unless they are pointed out by soldiers familiar with them.

"In consequence, the countryside in the battle area looks to the civilian much as it did before the war began—just a vista of rolling hills, green pastures and woods of darker green pitted here and there with tile-roofed villages whose chimneys smoke no more.

"Second, the concentration of men and equipment behind the French lines. An area stretching back many miles behind the front and covering nearly half of France is so packed with French troops and armaments as to constitute what experts say—and even the inexpert can readily recognize—as the greatest "concentration in depth" any nation and any war has produced. The display behind the lines offers indisputable evidence that the French mobilization has been completed without a hitch and suggests that if the Germans choose to attack they will find the French prepared to receive them as no army in history has ever before been prepared.

"Third, the spirit of the French forces. After seeing them at their posts it is easier than ever to credit the verdict of military experts that the French army is the best in the world. It is an impression strengthened not so much by the awesome display of numbers and guns as by the appearance and conduct of the men themselves. They look tough and they are unmistakably ready to see this job through to its end no matter at what cost. And what is most impressive of all is that although they are cocky they are not sophomorically so; many of them fought through the last war and they appreciate the difficulties ahead.

"Our visit to the front also convinced us of the truth of the claims of the French that casualties so far have been slight. No wounded or dead were seen and both officers and enlisted men said there have been very few as yet. Hospital trains lay idle and empty on sidings. Hospitals passed showed no signs of activity. No ambulances careened over roads near the front; those seen were parked in long lines along roads patiently waiting for business, as were medical units which occupied whole villages farther back.

"We left Paris at five o’clock this morning, rolling cautiously through the streets darkened against possible air raids and were on the out-skirts by dawn. Soon we began encountering sentries—all bridges and rail crossings from here to the front are guarded by poilus with fixed bayonets. We also passed sections of Paris’ air defenses—formidable batteries of long-range anti-aircraft guns, searchlights, sound detectors and range finders, all carefully camouflaged and set up either in permanent emplacements or behind sandbags and walls. Later we found ourselves speeding through towns and villages with names as familiar to American World War veterans as Soissons, Verdun, Metz, Rheims, Chalon and Nancy.

"We also passed huge fields which had been farms until few days ago, but which now are French military airports. Hundreds—sometimes it seemed like thousands—of bombers and fighters were scattered around the edges plainly visible from ground but probably hidden from enemy planes by their careful camouflaging. Men were busy hiding with leafy branches the offices and hangars of these flying fields or putting finishing touches to anti-aircraft gun emplacements around their borders.

"As we drew nearer the front, the number of sentries began to increase and the number of civilians visible to diminish. Soon we were passing through towns and villages taken over in their entirety by military units. Twice we passed buildings marked ‘ecole maternelle’, but whose sole occupants had so far emerged from the state of infancy that they had exchanged their bonnets for steel helmets and often badly needed shaves.

"Even in towns where troops were quartered, anti-aircraft guns stand in main streets and little French boys in belted smocks still practice broad jumping or roll their hoops in the streets. But those are towns at the outer edge of the military zone. Towns and villages for several miles behind the front proper have been evacuated of all their civilian inhabitants. Only their empty shops and houses and their herds of cattle, placidly chewing cuds within sound of artillery fire, remain. They are dead towns and passing through them is like passing through one of the deserted Eldorado towns in America’s Far West. They produce only a dramatic silence and that is so tense that as we began passing through these towns we began also to fear that somehow we had overrun [Continued on page 18]"
Football—Without Benefit

AFTER analyzing his Harvard classmates, college admissions procedure, and undergraduate reading tastes, John R. Tunis this year took his muck rake on an 8000-mile jaunt to football encampments all over the country. His findings, posted in the October American Mercury, brought almost as much of a stir as the famed Carnegie Report of ten years ago. This time Middlebury stood the test without even the scent of commercialism. Along with Williams, Tufts, Union, Colby—just half our 1939 opponents—and other top-notch educational institutions such as Wesleyan, Swarthmore, R.P.I., Hobart, and Rochester, Middlebury came off Grade-A in the Simon-pure, scott-free, scholastic-sheep list.

But if Mr. Tunis or the American Mercury had cared to make a spread of details about Middlebury’s Simon-pureness, plenty could have been found to make the case even more ninety-nine and one hundredths per cent. The crux of commercialism can frequently be found in a freshman football team. Are there too many scholarships for good academic taste there? The figures speak: of the thirty-one on the Middlebury squad, fourteen have scholarships. Of these fourteen, two hold senatorial scholarship appointments, and two special Vermont scholarships, neither of which could fall into a class of athletic sponsorship. In the final analysis just 29% of the members of the frosh football squad managed to get regular college scholarships and the total amount spent on this percentage adds up to $620 per semester—about half enough to take care of a single man in an old Pitt set-up. And the Middlebury figures are even more astounding when one realizes that 43% of the freshman class hold scholarships and only a quarter of the scholarship holders play football.

The scholarship roster for the varsity proves further that an undergraduate has to show his academic mettle before getting financial aid. As would be expected the percentage rises. In a squad composed of thirty-eight men, including managers, twenty-four hold college scholarships. This comprises 63% of the squad and compares favorably with the percentage of scholarship holders in the men’s college, which is sixty-seven.

With a set of digested percentages of this sort, amateur statisticians could prove almost anything they wish. (Over a period of years the figures do not vary appreciably.) Football scores only are used to feed the argument ordinarily. For the past few years the figures could have been used to prove that athletic scholarships are very unnecessary evils. With a relatively inferior season such as that of 1939 the same figures will be employed to argue for athletic scholarships. But the banter would lead approximately nowhere.

Early predictions were for a crack freshman football season. The first game with Union frosh was won by Middlebury 26–6 and bore out the prediction. Then came a scoreless tie with Kimball Union; New York Military Academy won by the margin of a point after touchdown, 7–6; the Vermont frosh triumphed 6–0.

The Varsity curve took a similar irregular course. As soon as the Williams game was in the bag 7–0, word went out that we were to repeat the record of 1936. Three successive losses—Tufts 2–13, Union 7–31, and Colby 12–13—curdled that hope, and attention was directed toward the State title. Norwich was subdued 12–0 before a homecoming crowd; the Hartwick game wound up with a scoreless tie and Coast Guard was conquered 19–14; and then even U.V.M. alumni were so sure Middlebury would take the State title in the last game that there was feverish talk against their coaching system—another good example of win-or-quit alumni chatter against coaches. Vermont won. It was a clean, unexpected, sensational victory 21–0—probably the most unanticipated upset for Middlebury in a decade of football history. The qualifications of the Vermont coaching staff were no longer questioned.

All of which is only an indication of football-fan fickleness in any college. Figures and scores have to be tallied and arranged over a long period to mean anything. Middlebury lost to Vermont this year, only the second time in over a decade. Anyone advancing argument pro or con athletic scholarships and Middlebury Simon-purity should bear this in mind.
Year-Round Santa Claus of Milwaukee

By Joseph C. Novotny, '26, Superintendent, WPA Toy Loan Project, Milwaukee, Wisconsin

Kris Kringle has made Milwaukee his headquarters. And unlike olden times, when he worked only one day a year, he now is on the job every day except Sundays and holidays, making kids happy. The playthings he passes out are not for keeps; they are loaned, without cost, in the same way in which a library book is obtained, so that thousands of Milwaukee children no longer have to wait a whole year for a toy, wagon, roller skates, doll or scooter. Each day they can get what they want—any article that commands their interest. The stock is vast. It is furnished by groups which play Santa Claus for the kids.

The advantages in putting Kringle to work the year around are seen as vitally significant by those who help to put new props under the American structure of action. The dominant thought is that in order to build a finer generation of youths, thus offsetting many of the problems which otherwise would be unsolved, the toy-loan feature should be nation-wide. Milwaukee's critical public thinks so. And residents of other cities, who like to study new methods to improve child welfare, could have an interesting time by visiting a Milwaukee toy-loan center after the kids get home from school.

To see a hundred or more little boys and girls riding on scooters, roller skates and tricycles along streets leading to a toy center regularly between 3:30 and 5:30 while seeking a time renewal or exchange is to realize the importance which every community should attach to a program of this kind.

The happiness shown by the kids while selecting a new plaything is a marked symbol of appreciation. It tends to prove that a child who grows up with play equipment suitable to his or her age is most fortunate. Out of the lending privilege is being developed a finer recognition of promptness and respect for the property of others, along with confidence and trust. Boys who once were negligent as a result of a lack of playthings have been revealing a better attitude in home and school since the toy-loan feature was started.

Play in some districts has become more orderly. Street accidents have been reduced. Children once unaccustomed to organized play, causing street mishaps and adding to the police problems, now are drawing police officers' praise.

At a time when unemployment and its resultant disadvantages are forcing family heads to adopt a stricter economy, which results in the curbing of pleasures of normal childhood, the toy-loan activities in Milwaukee county have been doing much to curb delinquency—the most disturbing aspect of our crime problem.

At this moment there is a total of about seventy-two thousand articles in stock at fourteen centers. These articles include almost every type of toy, game and play equipment. Thousands were furnished by labor unions, clubs and lodges. The fire department, after a vigorous drive, contributed a big truck load. School children added to the donations; so did the mail carriers, Kiwanis club, and various business groups including the grain and stock exchange.

During a four-week period five thousand or more Boy Scouts ransacked their homes for discarded playthings in behalf of the public toy-loan, contributing heavily.

Girl Scout troops did the same. About
nine hundred pairs of new roller skates, purchased in stores by donors, have been put into use. Requests for roller skates by children have been so numerous that thousands are needed to satisfy the demand.

In order to make up for a heavy shortage in stock after an increased registration and the opening of a new center had depleted the stock to a marked extent, a promotion involving the Milwaukee American Association Baseball Club resulted in the acquisition of about six thousand toys. These articles were donated at the ball park by children up to twelve as a feature on homecoming day. Each donor was admitted to the game without charge. Approximately six thousand youngsters attended the game and donated around seventy-five hundred pieces of play equipment.

A grand total of three hundred thousand loans have been recorded up to October 1st.

One mother wrote: "I wish that my children when getting a loan, would ask for roller skates instead of games, so that they could go on errands." This statement by a mother living in Milwaukee's outskirts, a considerable distance from a shopping district, is typical of the hundreds being received by the toy-loan officials as the demand for roller skates now exceeds the supply by at least a thousand pairs.

With a cooperative thought, housekeepers call the toy-lending headquarters when about to discard a game or toy. They realize that thousands of Milwaukee youths can be made happy through the use of these articles by way of the lending stations. Many discarded playthings were formerly thrown into ash cans and hauled to the city dump.

Every article in need of paint or repairs is placed in the hands of a skilled workman who makes it look like new before releasing it for use at the loan centers. About a hundred and fifty men, experts in their work but who found themselves in distress during the days of unemployment, make up the repair force which is sustained by the juvenile court and county board of supervisors for the WPA. Some are shoemakers and harness makers whose jobs are those of leather.

About a dozen women make doll clothes. They operate a laundry. They make smashed doll heads appear like new. As a result of this activity, some senior high school girls wash the clothes of dolls that are being loaned by children in their community. They wash dolls and do other tasks that keep their toy-loan stations in the lead.

The procedure for borrowing is simple. A child reports to a station and is given a numbered card requiring the parents' signature. Each boy or girl pledges to care for the plaything he or she borrows. After that the child may come back as often as he or she chooses, taking out as many articles as desired, one at a time, with a time-limit of one week. At the end of this time-limit the loaner may either make a renewal or ask for something else. Each article returned is inspected. Necessary repairs are made. The article is then scrubbed [Continued on page 18]
Seven Lean Years

By Paul D. Moody, President

WHAT should be the ratio of teachers to students in the ideal college? The various standardizing agencies have their answers. The ideal is said to be one teacher to every eight students. One to ten is efficient. A greater ratio of students means lessened efficiency, yet there are so many variables that it is doubtful if any one would like to be categorical. At Middlebury the ratio is 61 teachers to 799 students, i.e., one to thirteen. It is in part the result of the depression.

Some colleges faced with the necessity for retrenchment in faculty salaries reduced the staff and kept salaries untouched. They paid the same salaries but fewer of them. This meant increasing the work of the teacher, doubtless sometimes permissible. But it is dubious as a general policy, particularly if the student body showed a tendency to grow—a tendency to be encouraged in view of dwindling income from endowments. The worst of it was, that usually the younger men were let out. Other colleges, (Middlebury among them) did not reduce the staff but put into effect salary cuts—in other words, as many salaries as ever, but smaller. While at Middlebury these cuts were not large as compared to some other places, they were highly undesirable, though a loyal faculty accepted them without complaint. But often the cut entailed the wiping out of a margin which meant a good deal, and a rather worn overcoat was worn a year longer, or the purchase of needed equipment and books or plans for travel were postponed.

It is intensely gratifying that the alumni are increasingly aware of this and of the fact that it was necessary to reduce salaries at the very time it was found necessary to place a heavier student hour load on the faculty. The recent desire of the alumni council to stimulate late contributions from the alumni to offset this is welcome news. Should the contributions be large enough we might wipe out all cuts. And this is extremely desirable because until it is done it does not seem fair, either to make some highly desirable promotions on the one hand or increase the number of the faculty on the other.

It requires increased income to the extent of about $3,000 to restore one per cent of the salaries (for the reduction was applied to everyone without exception, the firemen and chambermaids as well as the oldest professor) and to make a complete restoration would require approximately $22,000. But half a loaf is better than no bread.

It is true we could increase our income with more students, but we lack the facilities for board and room and, if this were done, the load on the faculty would be increased, unless the faculty were enlarged. Then the benefit of a greater tuition income would be lost.

The ideal way would be to increase our endowment but at the present interest rates it would require not far from a million dollars invested capital to increase income sufficiently to cancel our present cuts. Many who would hesitate to give toward capital can annually, without serious inconvenience, contribute what would be excellent return on a capital gift.

In making donations toward faculty salaries Middlebury alumni may be confident that they are helping to take care of the most essential need of the College. The average age of our teaching staff at present is nearly 44; the average salary far too low to be a very gratifying professional income for middle age. We hope to raise this average, but restoration of the salary cut must come first. We look to alumni for making this year the last of seven lean ones.

Challenge from the Alumni President

By William H. Carter, '10, Superintendent of Schools, Barre

In all the hundreds of colleges and universities in this country it would be difficult to find greater loyalty than that of the twenty-seven hundred Middlebury alumni to their alma mater, yet statistics show that only three hundred of these twenty-seven hundred men make any contribution to alumni funds either in dues or gifts of any kind. There must be reasons for this paradoxical situation, which will stand serious examination.

Graduating classes have been so much larger in recent years that at present about half of our alumni have been out of college ten years or less. In a college as old as Middlebury, it would be hard to match this situation elsewhere. Many of these men are not as yet well established in business and they are therefore unable to make financial contributions which they would gladly make if they could.

Some hold that dues should be abolished and that an annual appeal for voluntary contributions should be substituted for the notice of dues. If a majority hold this opinion let us hasten to make the change. It does not seem to me that this is the real issue.

We have of late lacked definite objectives. The maintenance of a strong alumni association has not furnished sufficient appeal, worthy though it may be. We certainly can discover worthy and attainable goals if we set ourselves to the task. It seems to me that this is a most important aspect of the problem. Endowments and large building projects are beyond our reach unless backed by large gifts from foundations or wealthy individuals. Size is only one criterion by which the importance of an objective should be judged.

Be the problem simple or, as some think, very complex it can be solved when every alumni is made to feel the challenge. We might investigate for a few more years; we might send out a thousand wisely-worded questionnaires—blast the inventor of this type of modern torture—and we might thus at long last find out why we have not done better in recent years and then endeavor to start on a new program. My hope is that we will be willing to dispense with further investigation of a past record which many of us, including myself, do not wish to have too closely scrutinized, and adopt a worthy objective and really do something about it now.

Can we not for this year accept the goal set up by the Alumni Council at its meeting on October 28? At that time the Council voted to set a goal of $10,000 to go toward the restoration of faculty salary cuts and that the current year expense of the Alumni Association amounting to $1,500 be added to that objective. If the alumni of St. Lawrence University could raise $15,000 last year, $11,500 should be an attainable goal for us. We feel that nothing could bolster faculty "morale" more than the attainment of this goal.

Uncle Joseph

By Philip Battell Stewart, Hon. LL.D.

NINETEEN-THIRTY-NINE marks the 100th anniversary of the birth of Joseph Battell. It is almost a quarter of a century since his death. His father, Philip Battell, graduated at Middlebury College in 1823. He himself was in the class of 1859. Each had a stubborn loyalty to Middlebury and to its college. Joseph was able to, and did make gifts to the college of marked significance. They happily combined resources and money (without which no college can meet growing obligations to its students), but beyond this in the gift of a great area of primitive forest and mountains so near as to be merely the extension of the college campus; there is accessible to the college a field of inspirational and cultural value which in its possibilities is wholly unique among American institutions. The rapid development of the Bread Loaf School of English is the pioneer suggesting the still undeveloped possibilities which this land holds.

Twenty-five years easily erases all record of the personal characteristics of men, therefore a brief summary of Joseph Battell as he came and went in daily life is perhaps of interest to the generation now walking the ways of Middlebury College. His mother he never knew, his father was cast in the mould of Puritan New England. Philip Battell was a man of great tenderness of heart and great purity of heart, unshakable in his loyalties, the quality which above every other sets the foundation of steadfast character. Until he died at ninety he included his wife’s initials in all signatures of his name and she had left him almost sixty years before. Joseph Battell never outgrew the influence of these traditions and the influence of this association. His naturally independent nature never got far away from them. If it was not a substitute for a mother’s devotion and training, it was at least a partial compensation.

Ill health compelled an outdoor life. An accident led him to a farm at what is now Bread Loaf. He was never a farmer. His mind was too active and his energy too great, but the surroundings gave opportunity to develop in accordance with the qualities born in him. There was no social pressure around him to smooth off and modify his actions. He did what he wished to do and did it when he wanted to, whether at mid-day or at midnight. Whatever plans formed in his head passed without delay into the field of action. He was generous always to individuals, and in any plans which he felt were for the public good; any feelings hurt in his impulsive moods were almost invariably wholly healed. He was intense, even imperious in maintaining a position once assumed. He liked an audience which would not interrupt or heckle or interfere. He overrode opposition by his intense earnestness and in confidence that he was right. He rarely invited crossing swords with an individual, especially if the individual was competent in the subject, equally in earnest and mentally agile. His own attack was often keen and able, but ponderous like the rhinoceros which cannot turn once the charge is started. I suppose the legends about him emphasize this characteristic for it naturally was more obvious and better advertised. He did not at such times make use of a quality which he had to a marked degree, this was humour. When in the mood and in company where he was fully at ease he had a delicious sense of the foibles and incongruities of human nature as he met them and could, without a touch of disparagement, tell stories most revealing of the character of Vermonter, but he was usually sensitive to jokes on himself. He did not encourage familiarities of any kind and therefore I was the more impressed as a boy with a story he liked to tell on himself and always with the keenest enjoyment.

He went to Kentucky once to get information which he especially wanted to confirm his belief that the Kentucky saddle horse was founded mainly on Morgan lines of inheritance. He was the guest of a Kentucky gentleman of the old school. Before dinner the host asked Mr. Battell what he would have to drink. Mr. Battell never drank, he was strongly opposed to the use of liquor, a prohibitionist, but he
wanted to stand well with this new friend; he was in a country where the code of hospitality made whiskey indispensable and he said he would have a mint julep. The julep was brought, but no second drink. His host noted his hesitation and said—“Excuse me, but I never drink whiskey.” So a New England prohibitionist who never drank whiskey on moral grounds, drank the only mint julep he ever did drink and so far as I know the only whiskey he ever drank in his life, while the Kentucky colonel drank water because he never drank whiskey.

Another story with which Mr. Battell often made his hearers hilarious had its setting at Bread Loaf. There for many years a Miss Woodbury was the chief cook, but she was far more than a cook. She was a fearless self-respecting New England lady who carried herself like an ambassador’s wife. She looked every man and every situation squarely in the face with utterly fearless eyes. She made of cooking the accomplishment of a lady who would not demean herself by doing it other than perfectly. She naturally had the independent spirit which such a character would have. She and Mr. Battell had the greatest mutual respect for each other but at times he would impulsively cross the line which her independence had set, with the result not once but several times as follows:

“Well, Mr. Battell, I will go home to Bethel’” (some thirty miles distance). She would at once change her dress, put on her dark hat with its ornaments, take her hand bag and her canary in its cage, walk out of the house and start afoot for home, too proud to ask for a ride. Meanwhile Mr. Battell would retreat to a remote room, summon John Houston, tell him to hitch up the buggy and be ready and they would watch Miss Woodbury plodding east and disappearing at the slope of the hill a half a mile away. Houston, a natural diplomat, would then pursue, go through the somewhat protracted ritual of apology and a renewed treaty, and always come back finally with the triumphant woman at his side. Mr. Battell would come out of hiding and with this fresh warning that he must watch his step, things would move smoothly until he forgot himself again.

John Houston should not be forgotten ever in thinking of Mr. Battell. A young Irish woodcutter with an axe on his shoulder applied for a job in the very first years of Bread Loaf and while he and Mr. Battell lived more than fifty years, thereafter, they lived and worked together. John was a shrewd, industrious, [Continued on page 18]
“. . . Everyday Speaks A New Scene . . .”

By Charlotte Moody

“. . . so that with this, and the badness of the drink and the ill opinion I have of the meat, and the biting of the gnats by night and my disappointment in getting home this week and the trouble of sorting all the papers, I am almost out of my wits with trouble, only I appear the more contented because I would not have my father troubled.” Pepys’s voice does not come to us muted by the centuries intervening between his day and ours; it shouts in our ears and we give a start of recognition for who of us does not know exactly how he feels? A good diary—timeless and formless as it is—gives its readers that sense of recognition more frequently, perhaps, than any other literary form. There are not many good diaries. A good diary has to be written by an exceptionally good person, someone with an eager, appreciative, inquiring mind, more zest than (alas) is common, someone possessed of a gift of description and sufficient detachment to appraise, as the days rush past, those day-to-day events that make up our lives; someone who can see the tragedy in the broken shoe-string or the laundry that didn’t come back while recognizing that tragedy as something less than High. A good diary reveals something of its author and something of ourselves to us. I have been here, I have seen this, I remember that—if only I had had the wit to say it first!

Miss White’s is a good diary—Not Faster Than a Walk, published December first by the Middlebury College Press. It is concerned chiefly with the walks she has taken during a single year. And did she walk! Not sleet nor hail nor heat nor rain nor gloom of night deterred her ever. It will be necessary to quote rather freely from the book for it is the way Miss White sees and says things that makes them important. She knows and she can tell how winter sunsets look with black twigs limned against the sky, she has seen autumn crickets “too heavy to move,” “bright, touchable bushes” along the roadside which, oddly, look higher than the purple mountains look. She has seen a flock of grackles—“hundreds of shining black birds drifting through the yellow trees,” crows “perching in trees too small for them.” She has been to the mink farm and seen the mink with “faces like conscientious vampires.” She has found “fine beery boozy little apples” not spoiled by the snow, she has heard blackbirds singing overhead making a “man in the rigging chorus” and has heard “rain dripping from the roof like a water closet out of order.” One day “we wake to a campus so lightly covered with snow it looked like a very young person’s idea of a practical joke, peering out from white whiskers.”

“Here in Middlebury as nowhere else I have begun to realize what living with Nature around one means—to see the arbor vitae in shabby winter dress, the cracks in the ground made by the drought, the fine white sand at the creek-edge brought by the flood. To know bittersweet and barberry in flower and in fruit. To have stood on the hill slope in March when the wind was

Drawing by Edward Sanborn, from “Not Faster Than A Walk.”
battering down the sumach, and now to see it still flattened in the late summer time. To cover and fear that the house roof is coming off in the same February storm that uproots beeches and pine on Chipman Hill. To realize, in short, that the same forces which rule the outer world rule the human."

To people familiar with Middlebury—the college and the surrounding countryside—this book will have a special and peculiar interest, for the countryside is here—the Cornwall Road, the West Road, the cemetery and the Chapman orchard, Chipman Hill, Otter Creek. Miss White meets the Longwells out walking in the early spring. ("To see a robin ahead of the Longwells is like discovering relativity ahead of Einstein."’) There is a vivid and characteristic picture of the late, beloved Dr. Burrage urbanely ad-libbing when the library lights went out during an Abernethy reading.

But it would be treason even to imply that this is a book of purely "local" interest. The quality of Miss White’s mind would have made that impossible. She has that fancy Coleridge loved and which he distinguished from imagination and it runs through her comments like a silver thread. After seeing a Fred Astaire-Ginger Rogers film she wonders if the minuet was symbolic of a more settled society, if tap dancing may not have evolved because the earth turns too fast under our feet. After playing chess she wonders why a game that originated in the Orient should have a feminist figure as its most important, for the queen in chess is a fighter and a traveller, the king helpless and stationery as a vegetable compared. After a dramatic club performance of several of Eugene O’Neill’s one-act sea plays she wonders if the youth and freshness of Elizabethan boy actors may not have toned down the brutal effect of some of their blood-and-thunder tragedies. She thinks, on a cold winter day piled high with drifted snow, that this would be a good day to be rescued by a St. Bernard but wonders how half-frozen way-farers possibly contrive to open the tight little barrels of brandy around the dogs’ necks. She wonders why young people stop in their tracks at an arresting thought—and why older people do not.

Miss White herself is revealed only by implications. Hers is a wise and eager mind. Often it is a gay one. She loves to hear about bears, and the big iced cakes at church suppers she finds "intoxicating." Often it has a quick, sharp turn which leaves the reader breathless. "Today in cataloguing Irving Babbitt’s Rousseau and Romanticism I find only his birth date given on the former author cards, though I know that he has died. On this new card too I omit the death date, childish thinking to give him a little more inclusion among the living by pretending not to know that he is dead." And again—"Two of Skippy’s kittens died today and she has hidden the other two. It seems to me touching for her to try to outwit Death."

Miss White has a nice irony and she is not, thank God, above a little carping. She does not much care for the Rutland coach which one catches in New York at 8:15 a.m. (leaving earlier and arriving in Middlebury later than it used to). She takes a passing side-swipe at senders of Christmas cards who write a lot of bad news between the gay picture and the gay seasons’ greetings. Nor does she always like the weather: "The best you can say of this climate is that it doesn’t unleash all its abominations at the same time." After a page or so detailing the foibles of various academicians she adds thoughtfully: "Such are the contributions of intellectuals to the command to be as little children." Her comparison of Byrd and Thoreau is satisfyingly devastating and—out of a clear sky—comes this: "Are you dissatisfied? Say to yourself that every day you keep out of a lunatic asylum represents a clear gain."

This is an exciting book for all it is so quiet. "At last I have the wish I wished so many times over in the city—to see the continuity of Nature." Miss White has her wish, and it is generous of her to share it.

Further riches are provided. Mr. Walter Pritchard Eaton has contributed a very characteristic preface which is to say that it is both charming and caustic. His preface is charming—for who understands these matters better than Mr. Eaton?—and caustic (a little) because he thinks it was naughty of Miss White to pick a purple fringed orchis at Bread Loaf, an orchis which he had been chivalrously protecting. And there are also really delightful drawings by Edward Sanborn, admirably suited to the book’s spirit and purpose.
ANY layman stepping into the apparatus room of a college physics department would be appalled at the quantity of apparatus necessary for instruction in even a half dozen fundamental courses. Tier on tier the equipment rises, ranging from simple prisms and mirrors to interferometers and telescopes, from ordinary thermometers to thermopiles and calorimeters; from tuning forks and organ pipes to phonodikes and oscillographs; from electric cells to generators, potentiometers, galvanometers, voltmeters, and ammeters. Thousands of items, miniature or enormous; impressively complicated items; little gadgets that cost five hundred dollars and may be used once a year for ten minutes to illustrate a minor point; big gadgets that require the services of the janitor to move and then a full day to assemble and set up for a brief classroom demonstration. The variety in the apparatus room would baffle even a veteran small town department store clerk.

And the strange thing about this collection is that it is relatively new. Unlike a library, it has not been accruing in quantity for college generations. Most of it has been crowded onto the shelves in the past two or three decades.

Forty years ago, the turn of the century was being taken advantage of by journalists to predict that no future century could possibly match the 19th in its scientific advancement. They conceded that many of the discoveries in physics and chemistry would be improved upon, but the march of science would very soon begin to slacken in pace for lack of new horizons.

Only in science museums is it possible to get a very graphic idea of how terribly wrong those journalistic predictions were. And museums equipped to tell more than a suggestion of the story are few. Science equipment is perishable and scientists as a rule are interested in futurity; they are not antiquarians.

As in the 20th century, so in the 19th, colleges and universities furnished a major haven for scientific exploration and invention. But here laboratory antiques are doubly perishable, thanks to undergraduate wear and the vicissitudes of faculty tenure. Several colleges have established little museums where obsolete equipment is kept; but most of them have discarded it as new and better apparatus replaced the old. Middlebury has no such museum, but it does have an exceptional collection of relics.
dating back to the earliest days of the college, when its science training must have ranked among the foremost in the country.

It is interesting to note that the very first professorship established at Middlebury was not in Latin, Greek, or Religion, but in Science. This honor fell to Frederick Hall who was appointed professor of Mathematics and Natural Philosophy in 1806. Previous to that time President Atwater and a succession of tutors had been dependent upon instruction in this field. But one year of teaching apparently convinced Professor Hall that his background was inadequate and that there was no institution in America where he could get the quality of instruction he wished to pass on to Middlebury students. England and France were still the mother countries of the sciences, so the following year to Europe he went—direct to the sources of current scientific knowledge.

In Paris he sat at the feet of the expatriated American physicist and chemist Count Rumford. He took notes on the “philosophical” instruments of the great minerologist Abbe Haury. Le Sage and dozens of other scientists became his close friends and tutors for a period of two years. In February 1809 he returned to Middlebury laden with the latest books and instruments available. For the next fifteen years the college had one of the best qualified teachers of Natural Philosophy in the United States, commanding a salary even larger than that of President Atwater. Hall’s name is attached to no Middlebury fellowship, no monument, for the benefit of posterity; and extensive research fails to give much more than a clue as to the reason for his departure from Middlebury. But in all likelihood local jealousy over his prowess was responsible. Both Castleton Medical College and Dartmouth saw fit to give him doctors degrees after leaving Middlebury, but from 1824 on he was mysteriously scratched from the Middlebury records.

If Middlebury should ever establish a science museum it should by all means bear the name of Frederick Hall, since the nucleus for such a museum would be the scientific apparatus he brought here from Europe a century ago and a quarter ago. The Journals of the General Assembly of the State of Vermont for 1810 give the only inventory of the equipment Hall assembled: “The philosophical apparatus, which owes its existence to the bounty of individual gentlemen, consists of an Air Pump, an Electrical machine, two artificial globes, a large and small Telescope, Quadrant, a Theodolite, a Camera Lucides, two Thermometers, a Galvanic Pile, a Hydrostatic apparatus, a Prism, and Mirrors of different kinds, with a variety of small instruments.”

Many of the pieces have somehow withstood the test of time and student usage and are still among the hand-me-downs of the Physics department. Originally in Old East College, they were moved to the Physics laboratory of Old Chapel in the 1830’s where they saw service for over sixty years, and in 1901 were taken to Warner Science Hall where for nearly four decades they were carefully guarded by Professor Bryant.

Last spring a score of the older pieces of apparatus were photographed and Professor John Bowker, then in England, was given the assignment of trying to identify them from records and displays at the Science Museum in Kensington. But in spite of his detective work and the interest of museum officials, little definite information could be obtained. Even that greatest of all scientific repositories shows the effect of a lack of antiquarian enthusiasm a hundred

[Continued on page 19]
C’EST LA GUERRE
(Continued from page 6)
the front line and were in no man’s land.

“The fields about these towns are aglow with those poppies
Alan Seeger made immortal, but there are no ‘kerchiefed women in
those fields patiently chopping sugar beets nor any farmers plowing in
preparation for next year’s crop. But not many miles behind the
front the trick of tilling the soil goes on as usual. It was at Sar-
reguemines, one of the deserted towns, that we first reached German
soil. It was possible to identify this precisely because for many
days now the area several miles in front of Sarreguemines has been
exclusively in French hands.

“Rolling down the town’s main street past an occasional sentry,
we came to an intersection with machine guns behind sandbags.
We turned a corner in the direction the guns pointed and came
upon a small German, or what had been the Franco-
German frontier until the French began their advance, was only a
few paces away on the other side of the bridge. It had a far more
peaceful appearance despite the machine guns nearer than some
farter behind the line, and especially some roads back where,
along roads and through towns, over wide stretches behind the
front were parked long lines of ugly looking big guns and even
longer lines of light artillery supply trains, pontoon bridge units
and countless troop transports—all camouflaged and all waiting
for the next push forward.

“And all over the fields bordering these roads soldiers were
digging in with spades and shovels, putting the finishing touches to
gun pits and pill boxes whence they could dominate the country-
side if the Germans took the offensive and by some miracle broke
through what is now the French front. Permanent barbed-wire
entanglements and lines of tank traps stretched away from both
sides of the road. The troops were a little bored with the lack of
action, but otherwise in high spirits, and the Parisians among them
shouted gleeful greetings on seeing our Paris license plates.
The troops were beginning to let their beards grow and soon will
resemble the poilus of the A.E.F. veterans knew, a resemblance that
will be heightened by the fact many still wear uniforms wholly or
partly horizon blue.

“Many middle-aged men with graying hair and portly torsos
were among these troops. They are mostly specialists, veterans of
the last war who will man key machinery in this one and show the
younger how to fight both well and prudently. They symbolize the
arrival of mechanized warfare and the fact that wars are no
longer exclusively the affair of young men with strong backs, flat
stomachs and more zest than sense.

“The men and officers alike were eager for news of the world
behind the front. They had had no papers at the front for ten days,
they said. They were plainly delighted to see Americans, and, of
course, always as soon as politeness allowed when the
United States was going to enter the war to help them put down
Hitlerism. But they were equally anxious to know what Russia
and Italy were doing, and had we seen any English troops along the
front.

“They still eat well on the front. Although our hosts apologized
for the food, saying ‘We aren’t rich here,’ they provided a six-
course luncheon that began with sardines and went on to include
sliced tomatoes, a pâté, grilled veal, green salad, apple dumpling
with mocha sauce, and coffee. With this there was an atmosphere of
beaujolais and riesling.”

YEAR-ROUND SANTA CLAUS OF
MILWAUKEE
(Continued from page 9)
in a sterilizing solution before it is again placed on display for use.
Each toy or plaything is sterilized before being given to the next
loaner.

There are no loan restrictions. All children are eligible to
borrow. They do not have to pay for repairs. But evidences of
misbehavior which warrant a penalty are offset by an order to the
effect that no more loans can be had over a certain probation period.

Up to the time of the establishment of this feature, thousands of
Milwaukee youths were toy starved. Now they borrow every-
thing that suits their fancy, showing an improved attitude in home
and school. In several wards the school officials are lauding the
results that have been attained through the toy-lending program.
Kindergarten pupils in some schools are permitted to bring their
toys with them from home.

Holders of birthday parties find the toy-lending centers most
opportunity when in need of play articles. Recently a little girl
appeared with six friends to get what they wanted for a birthday
party. One selected a table and chairs. Each of the others picked
a game. At the same time a 1-year-old boy came in to negotiate his
5th loan. He has never returned a broken toy. A week ago he
donated a plaything which his parents had purchased for him
last Christmas.

In another instance of action denoting gratitude, a father
contributed a bicycle which his son had outgrown. A few days
before he asked for a loan of a bicycle, knowing that he would be
unable to buy a new one this year. His request was honored. The
bicycle donated later by the father was as good as new.

“I never had as good a toy to play with before in my life,” one
youngster told a policeman after making his first loan of a scooter.

Some children have offered to pay for broken toys, bringing
money with them. They are simply asked to be more careful the
next time.

UNCLE JOSEPH
(Continued from page 13)
temperate, frugal Irishman, the twinkle never left his eyes. He
rarely raised his voice, a real Irish gentleman with the trading
intensity of a Scotchman. He had not a per cent or more of the buy-
ing of lands, farms, horses, and the supplies for the hotel; he hired
all the help; he ran the farm winter and summer; he knew Mr.
Battell’s every mood. I do not know that they ever had a quarrel.
He died at over eighty years of age in Middlebury on one of his
numerous farms he had acquired with the savings of an industrious
life.

Mr. Battell bought his first wooded lands to protect the outlook
from the porch at Braed Loaf. He could not bear to see Worth
Mountain defaced. The idea expanded to cover other areas in sight
to the east and north. The notion that these purchases were a good
investment was a factor from the start and he bought finally wherever
a good trade offered. More and more the desire for permanent pro-
tection to these forests grew on him. He had loved their beauty
and it was their esthetic value which was uppermost in his mind.
Conservation to protect water sheds and to harvest woodland
without waste and as a recurring crop was part of the consciousness
of people in the earlier years and I think had very little place in his
own mind, but the problem how to achieve the security of these
fine forests in the future confronted him more and more and one after
another plan was discarded. At one time the plan to give them to the
College was given up, but regretfully I think, for he did not at
first feel that disposition insured what he desired first of all, and
that was the perpetuity of the woodland cover naturally grown
and irreplaceable by any method of artificial reforestation.

Mr. Battell was about five feet eleven inches high, he weighed in
later life something over two hundred pounds. His hair was
auburn, his eyes were blue. He had few books and he read little.
He played the piano and sang barely enough to get pleasure out of
simple ballads. He was never vulgar or profane in speech. He
played with romance but was extremely cautious and shy beyond
the first approaches. He had no physical recreation other than
driving. I do not know that he ever got on a horse's back in Vermont.
He did not hunt or fish. He enjoyed old friends but was really inti-
mate with no man. He kept an inner-self wholly in reserve. He
had quick reaction and moved like lightning when occasion called
for it. He was tender toward distress and suffering. He routed a
crime police department one Sunday to rescue a frightened kitten,
prisoner on the outside of a building. He gave help freely and
generously to young people. He could not take part where there
was suffering or illness. His religious traditions were never out-
grown. He attended church often, but was not required being held
by narrow bound or literal interpretations. He didn’t care what
church or creed was professed, providing there was sincerity. He
was an indefatigable worker on any subject which had his attention.
He was able and intelligent in defending some thesis of his own.
He was a partisan but a doughty advocate. His partisanship disappeared when dealing with individuals. Here he was fair and generous and took full note of both sides. He was a militant partisan for Vermont and Middlebury, for Vermont women and Vermont horses. He worked prodigiously for years and spent thousands of dollars to uphold the Morgan horse when he found the Hamiltonian partisans were threatening the prestige of the local breed, and perhaps it is fair to say that he saved the breed from submergence. In the perennial forests which he gathered and in Forest Hall at Middlebury College, which was a by-product and which will indefinitely influence the lives of young women, Joseph Battell has an honorable and as nearly permanent a monument as any mortal man could expect.

WHENCE PHYSICS

[Continued from page 17]

years ago.

To middle 20th century eyes and ears, Hall’s classes in Physics would be pathetically naive. Laboratory methods had not then been introduced to the curriculum. It was dull theory in what must have been rather dully abstract lectures. Illustrations in text books undoubtedly helped to a degree, but drawings were expensive for any publisher to reproduce and they were cheap of them. Moreover texts were few. He and his students could consult perhaps half a hundred books in Natural Philosophy, which often included Astronomy, Botany, Chemistry and Geology as well as Physics. Today there are over a thousand volumes on physics alone in the Starr Library. His classroom may have had as many as three or four dozen instruments, but aside from the few brought from Europe or Boston he had to build his own apparatus. He could make a set of batteries but not readily buy them. By turning a crank of an electrostatic machine he could produce an electric current, but the result was unsteady and there was no accurate way of measuring the current. He had lenses, mirrors and prisms, but he had not heard of spectrometers, optical flats or interferometers. With tuning forks, sirens and organ pipes he could produce various kinds of sound, but he had no way of reproducing that sound or taking satisfactory intensity measurements.

If Hall could be recalled to our present laboratory, two things would probably interest him most, the common outlet plug and a Physical instrument supply catalog. The simple electric plug would open an incredible new world to him. And the catalog would symbolize for him the fact that a successful physics demonstration no longer depends entirely on the resourcefulness of the instructor. Instead of spending weeks building an instrument he could merely ask an assistant to wire for his equipment. The next morning it would magically appear on his desk.

But Professor Hall’s modest little collection of hand-wrought instruments are somehow incomparably more fascinating than all the machine made calorimeters and microscopes and phonodikes advertised in the 1940 supply catalogs. If the scientist can permit himself to go romantic occasionally here is recognition of the first order, a commentary on the history of science and an eloquent reminder that predictions regarding a future for science are worth slightly less than the pulp on which they are printed.

NEW ALUMNAE SECRETARY

Lois Bestor, ’37, is the newly appointed Secretary of the Alumnae Association, replacing Muriel Jones Nelson, ’37, who was married in October. Before coming to Middlebury in November, Miss Bestor was assistant registrar at Stoneleigh College, Rye, N. H.
Personal News and Notes of the Alumni

NEW HAMPSHIRE AND ALBANY DISTRICT ALUMNI DINNE

The alumni and alumnae of the New Hampshire district held a luncheon at the Ellis Hotel in Keene, New Hampshire on October 19, with Arthur T. Brush, '30, of the Manchester Union-Leader, president of the District, presiding. President and Mrs. Moody and Mr. and Mrs. Wiley were the guests from the College. President Moody spoke on present developments at Middlebury and Mr. Wiley illustrated his talk with colored motion pictures of college scenes and activities. Arrangements for the luncheon were in charge of Miss Isabelle U. Esten, '14, Dean of Women at Keene Teachers College. Dr. Charles J. Lyon, '18, head of the biology department at Dartmouth College, was chairman of the nominating committee on whose recommendation Mr. Brush and Miss Esten were reelected as president and secretary and Phelps N. Swett, '34, assistant manager of the Sears Roebuck store in Concord, was elected vice president for the coming year. Attendance: 41.

The Capitol District alumni and alumnae dined on the evening of October 19, at the Hale House on the Union College Campus in Schenectady. Miss Edith H. Tallmadge, '21, president of the club, presided. Local arrangements were in charge of Philip E. Brewer, '31, of Schenectady. In addition to the program presented at the Keene luncheon, Miss Rose Martin of the Middlebury faculty spoke on the subject "Languages Are Fun." Attendance: 40.

The Century Club of Middlebury held a dinner at the Lockwood Inn, Dublin, New Hampshire, on August 27th. Among those present were: Mr. Orvis Collins, '02, and Mrs. Collins; Mr. Walter Barnard, '01, and Mrs. Barnard; Mr. Earle Parker, '01, and Mrs. Parker, x'03; Mr. E. H. Coffin and Mrs. Coffin, x'00; Mrs. Alexander Wadsworth, '00; Mrs. Fay Simmons, '01; Miss Josephine M. Taft, Miss Beatrice K. Taft, '00; Miss Eloise Barnard, '33; Miss Ruth Barnard, '31; and Mr. John Parker.

Monica Stevens, '38, corresponding secretary for the New York City Alumnae Association, will welcome the names of Middlebury graduates in New York City or vicinity who may not be receiving notices of the alumnae meetings during the year, and would like to do so. Her address is: 37–39 74th Street, Jackson Heights, L. I., N. Y.
